Welcome to the Library!

Library News

Library news and information resources at the University of Winnipeg Library.

POWERED BY MOVABLE TYPE 3.2

MAKING BIBLIOGRAPHIES MADE EASY!

A RefWorks button has been added to the GODOT window that allows you to instantly import a citation into your RefWorks account. The GODOT window comes up when you click on the *Where can I get this? Ask GODOT* button, when you are looking for the full-text version of an article.

What exactly is RefWorks? RefWorks allows you to create your own personal database of citations. With the click of a button you can convert your citations into full bibliographies in a variety of styles, such as MLA, APA, and Chicago. Using GODOT to automate the exporting of citations to RefWorks helps you make your bibliographies fast and easy!

Thermal preference and activity thresholds in populations of *Argia vivida* (Odonata: Coenagrionidae) from habitats with different thermal regimes

Leggott, M.A. and Pritchard, Gordon (1986) *Thermal preference and activity thresholds in populations of Argia vivida (Odonata: Coenagrionidae) from habitats with different thermal regimes*. Hydrobiologia, 140. pp. 85-92.

Full text available as:

[PDF](#) - Requires [Adobe Acrobat Reader](#) or other PDF viewer.

Abstract

The hypothesis was tested that isolated populations of *Argia vivida* Hagen living in habitats with different thermal regimes would show similar larval temperature preferenda, similar distributions in temperature gradient, similar larval upper temperature activity thresholds, and similar adult minimum temperature flight thresholds. The hypothesis was supported in all cases, except for distribution within the gradient, where there were significantly fewer observations below 22C in a population from a habitat with a fluctuating diel and annula temperature regime than in a population from a more thermally stable habitat. Larval modal temperature preferendum was 28 C; escape temperature (EST) was 35.4-36.4 C, critical thermal maximum (CTM) was 39.1 -41.0 C, and upper lethal temperature (ULT) was 44.4-46.0 C. While technical difficulties affected the estimates of flight thresholds, there was no difference between the field estimates from different sites. Minimum body temperature for flight appears to be about 25 °C, apparently higher than for several other zygopterans, while larval activity thresholds and 96 hr LD50 of 36.8 C are similar to those recorded for other odonates.

Thermal preference and activity thresholds in populations of *Argia vivida* (Odonata: Coenagrionidae) from habitats with different thermal regimes

Mark Leggott & Gordon Pritchard¹

Department of Biology, University of Calgary, 2500 University Drive N.W., Calgary, Alberta, Canada T2N 1N4

¹Author for correspondence.

Keywords: Odonata, Zygoptera, *Argia vivida*, thermal preferendum, activity thresholds

Abstract

The hypothesis was tested that isolated populations of *Argia vivida* Hagen living in habitats with different thermal regimes would show similar larval temperature preference, similar distributions in a temperature gradient, similar larval upper temperature activity thresholds, and similar adult minimum temperature flight thresholds. The hypothesis was supported in all cases, except for distribution within the gradient, where there were significantly fewer observations below 22 °C in a population from a habitat with a fluctuating diel and annual temperature regime than in a population from a more thermally stable habitat. Larval modal temperature preferendum was 28 °C; escape temperature (EST) was 35.4–36.4 °C, critical thermal maximum (CTM) was 39.1–41.0 °C, and upper lethal temperature (ULT) was 44.4–46.0 °C. While technical difficulties affected the estimates of flight thresholds, there was no difference between the field estimates from different sites. Minimum body temperature for flight appears to be about 25 °C, apparently higher than for several other zygopterans, while larval activity thresholds and 96 hr LD50 of 36.8 °C are similar to those recorded for other odonates.

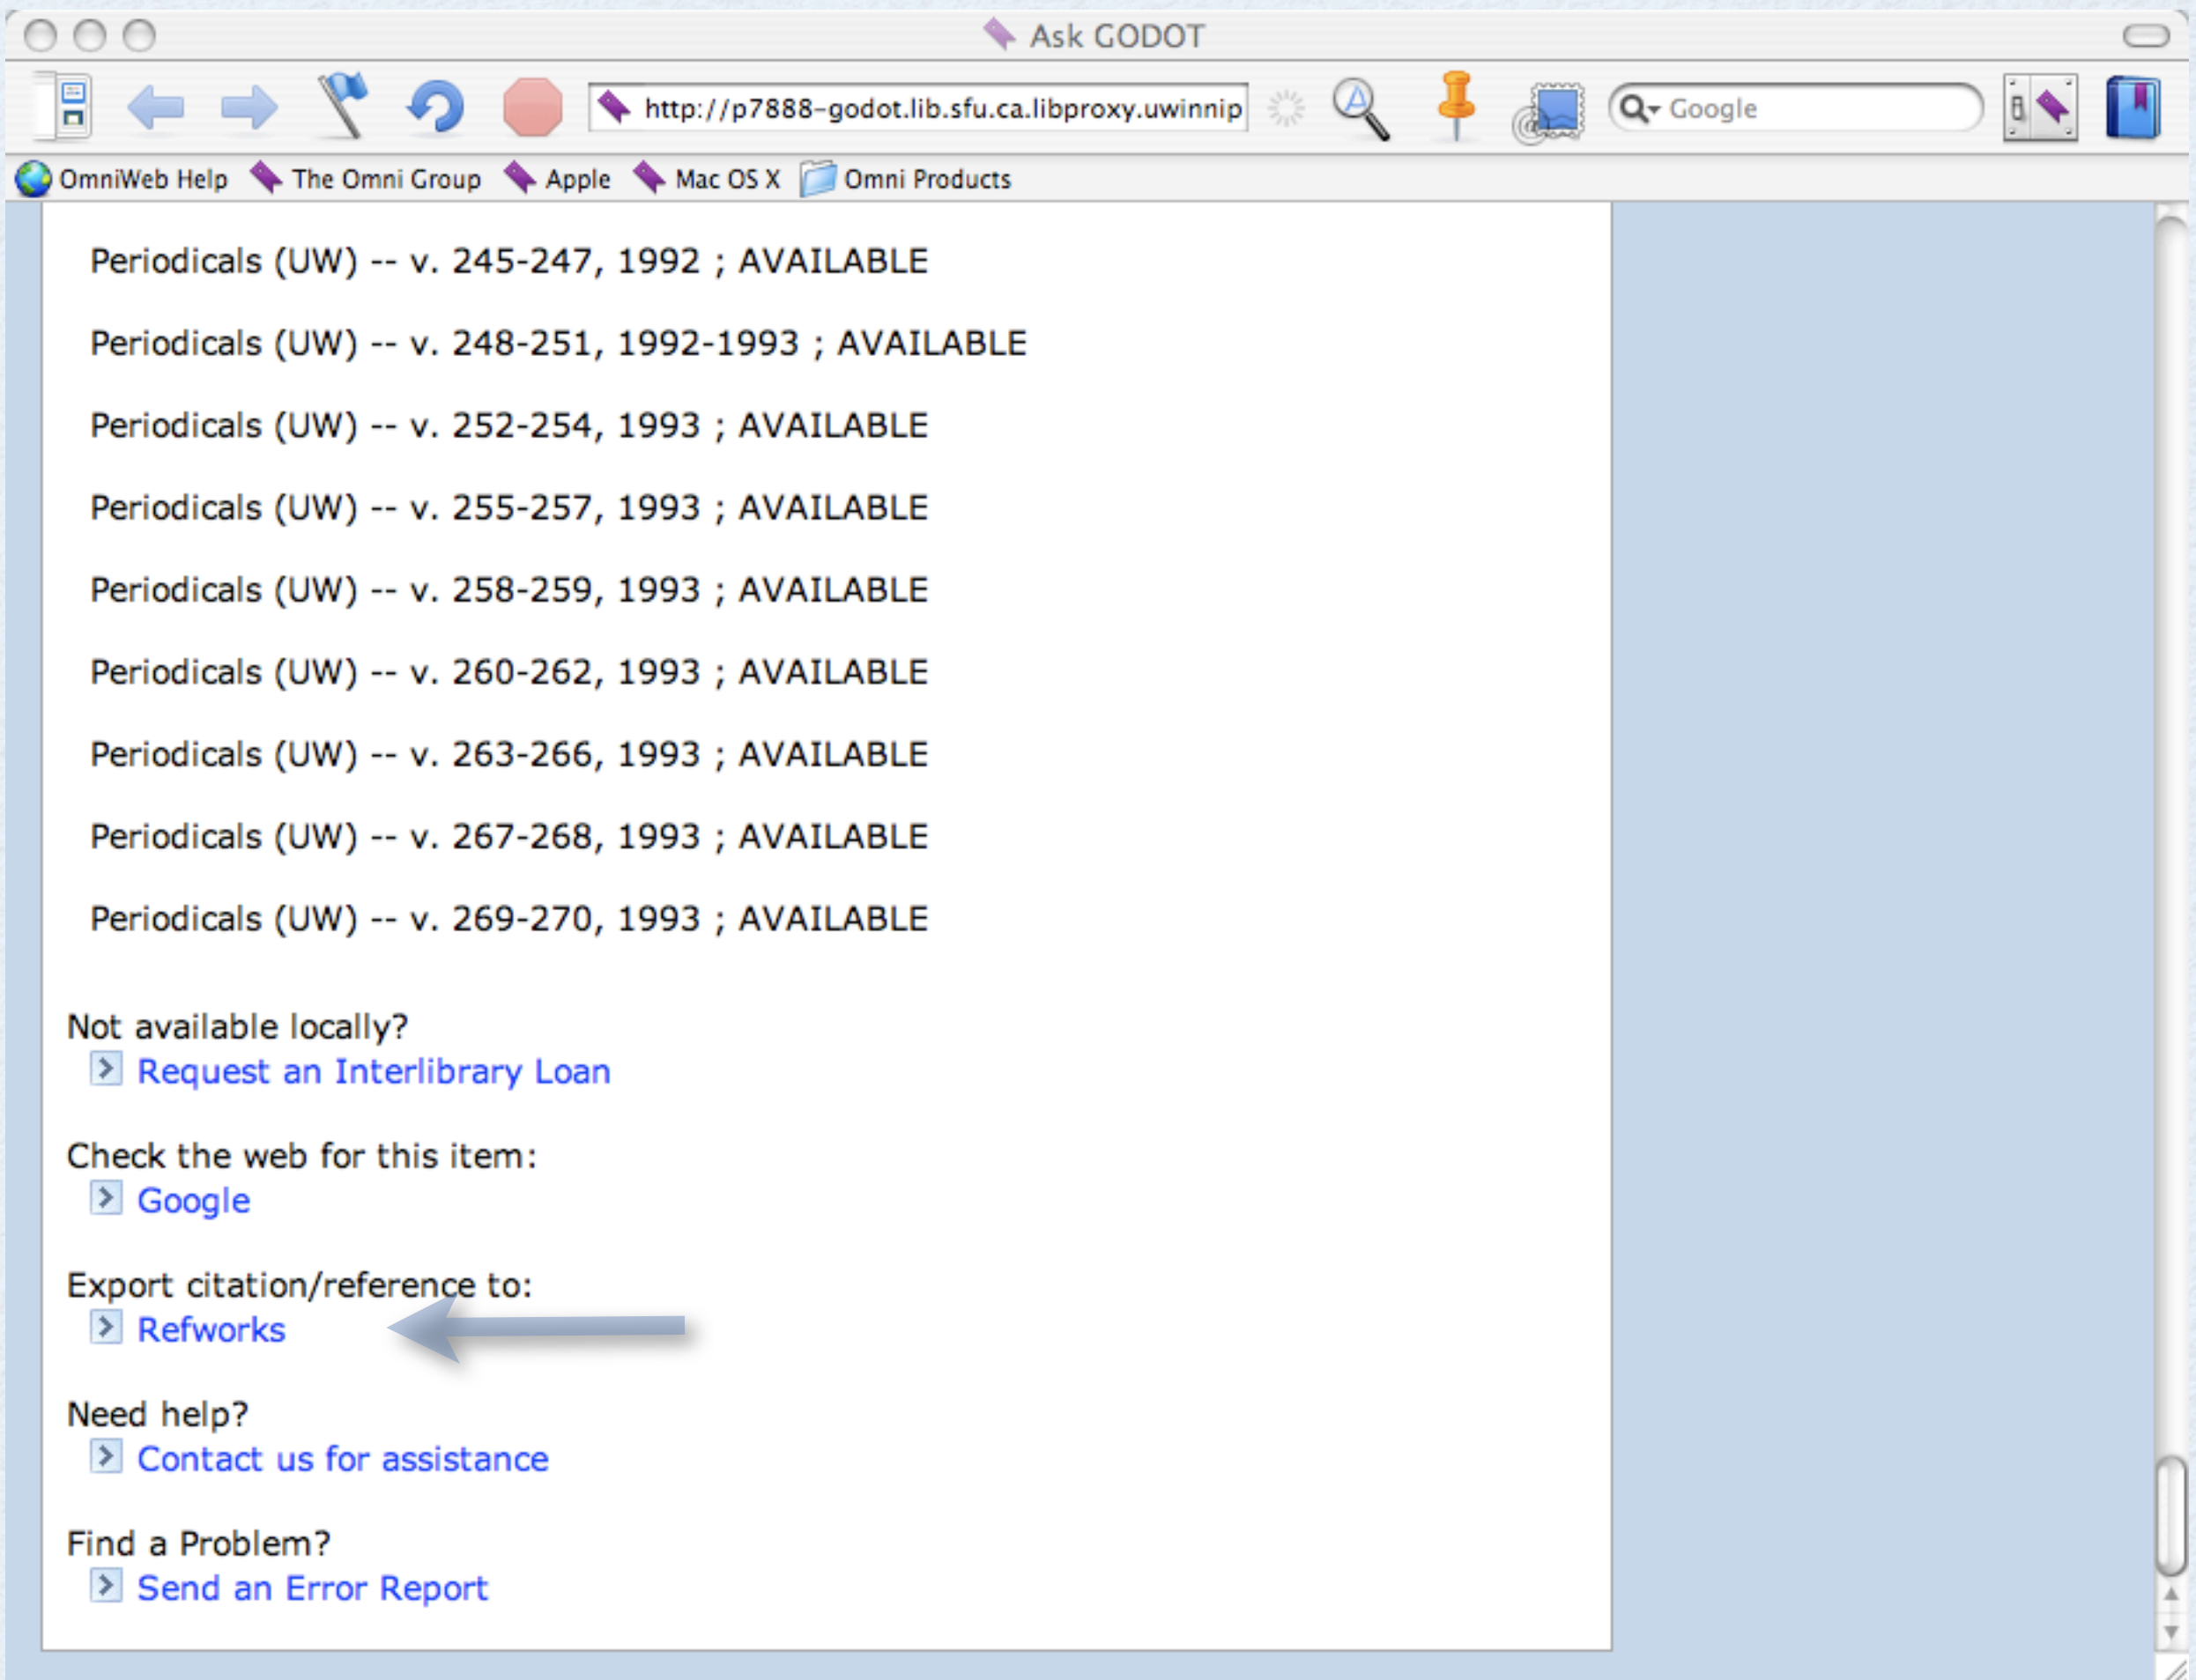

Introduction

The genus *Argia* is limited to the New World. Pritchard (1982) argued for a Central American origin for the genus and discussed possible mechanisms whereby successful colonization of North America might have occurred. This led to the hypothesis that range extension in the most northerly ranging species, *Argia vivida* Hagen, had been accomplished by the exploitation of suitable larval habitats (geothermally heated streams) and by seasonal regulation of the life cycle, rather than by adaptations to the prevailing temperatures. The present paper examines certain responses to temperature in populations of this species living in habitats with different thermal regimes.

Methods

Field Sites

Three sites were used: Cave & Basin Hot Springs, Banff, Alberta (51° 10' N, 115° 34' W); Albert Canyon, British Columbia (50° 50' N, 117° 55' W); and Deep Creek, Idaho (42° 24' N, 112° 44' W). All sites are in geothermal areas but the influence of geothermal activity on the three streams differs considerably. The water at the Cave & Basin site is maintained at a fairly constant 26 °C year-round, whereas Albert Canyon has a smoothly changing annual cycle that varies between 5 °C in winter and 20 °C in summer, with very small daily fluctuations (about 2 °C in summer), and Deep Creek varies from 0 °C to 33 °C, with ice cover for 3 months and daily fluctuations during the summer of 15–20 °C. The annual degree-day accumulations above 0 °C for the 3 sites are 9500, 3800, and 2560 respective-

Ask Godot: Results

U of Winnipeg appears to have 'HYDROBIOLOGIA' .

Are you sure you want to order this item from another library?

If the volume you need is missing or at the bindery, please include a note to let us know you have checked the shelf.

If the item you want is held at the University of Winnipeg but on loan to another borrower, use the REQUEST button in the U of W Library catalogue to place a hold on the item.

Use the back button to return to the previous screen and then use the CHK button next to U of W holdings to go directly to the library catalogue for the item in question.

About "Ask Godot"

Ask Godot will show you if our Library has the item (article or book) that you requested. If the article can be read online we'll show you that information first, and try to link to the article (if possible), or the table of contents, or possibly a database.

If the item is available in our Library this screen will show a link to the U of Winnipeg Library catalogue. That means you can come to the Library and borrow, copy or read the item, depending on where and what it is.

I would just like to thank the library for the great document interlibrary loan program. I really appreciate the effort which goes into getting these articles on behalf of students. It has allowed me to work on essays which I otherwise would not have been able to do. Thanks.

Does the library have any sort of recycling system for filing away these documents after they are used? This way future UWinnipeg students would also have access, without the need for UW to obtain the document from another University once again. I suppose copy right laws might get in the way, but if something like this could be created I think it would be most useful to the University and students.

Comments: 3 Comments by cybrary ...

cybrary 23/11/2004 18:37:47

This is a good idea. There could be links to inside the wiki, links to cybrary, links to UWinnipeg, and links to movies, weather, etc.

XWikiGuest 22/11/2004 15:14:38

Would it be possible to offer local web sites as part of the default set of links. Sites like winnipegweb.com for instance have links to lots of local info and would make it quicker to use the computers.

XWikiGuest 17/11/2004 14:39:48

Just wondering whv we have the option to write out assignments in

Warm-up Exercise (10 minutes)

[\[edit\]](#)

Even if you don't like candy, grab a lollipop (this only works if you're attending a workshop in real time - if you're virtual, pretend you have a lollipop). You may wonder why the Library gives out Lifesaver Pops. Well, it's because when we first designed the logo for our Live Help service it reminded some of us of a lifesaver candy. Some students even describe Live Help as a lifesaver!

Your Computer Account (40 minutes)

[\[edit\]](#)

We'll get your University of Winnipeg computer account setup, use your network storage and login to MyUWinnipeg.

Connecting: From Wireless to Dial-up (10 minutes)

[\[edit\]](#)

Need to use your laptop on campus? Or perhaps hoping to use the free dial-up access to the Internet from home? Here's how.

NetMail (10 minutes)

[\[edit\]](#)

Why you should bother to (sometimes) use your University of Winnipeg email account.

Welcome to The University of Winnipeg's Global College Wiki. We want to hear from you. Your engagement with the Global College via the participatory environment of Wikis is one way. Another way is let us know about any ideas or suggestions you might have that would encourage dialogue around today's global issues. Send us your ideas! <mailto:c.kehler@uwinnipeg.ca>

War-Affected Children Conference

[\[edit\]](#)

Greetings from The University of Winnipeg,

As you'll recall, The University of Winnipeg OmniTRAX/Broe QUEST War-Affected Children Conference was hosted by the Global College September 9-10, 2005. The [QUEST website](#) already provides a number of helpful links; over the coming months many more resources will be added.

You'll recall, too, that at the end of the QUEST conference, we came away with a list of action items. The University has posted to an interactive(WIKI) site the list of action items, as well as a Statement that has emerged from the event. Once edited, we would like to send both of these items to the Government of Canada.

We welcome your input as we want to ensure the Statement and list of Action Items reflect accurately the spirit of the conference. We invite you to use this Wiki to edit these two items (below in red). Please provide your input by Monday, October 31, 2005. Edits will then be compiled and a final Statement and Action Items will be sent on behalf of the QUEST War-Affected Children Conference to the Government of Canada during International Education Week in November 2005.

Statement

We the people of The University of Winnipeg Community call upon the Canadian Government to take immediate action in supporting United Nations Security Council Resolution 1612 - *Children Affected by Armed Conflict* and to begin taking action today by:

1. working with the local Tamil Community to help stop the use of child soldiers in Sri Lanka;
2. supporting the peace process in Uganda;
3. beginning widespread rebuilding and reconstruction of Southern Sudan;
4. by addressing the Human Rights abuses going on in Haiti and in Burma.

BRICKS WOULD BE BETTER
THAN AN EDIFICE

LIFE AS A STAFFER

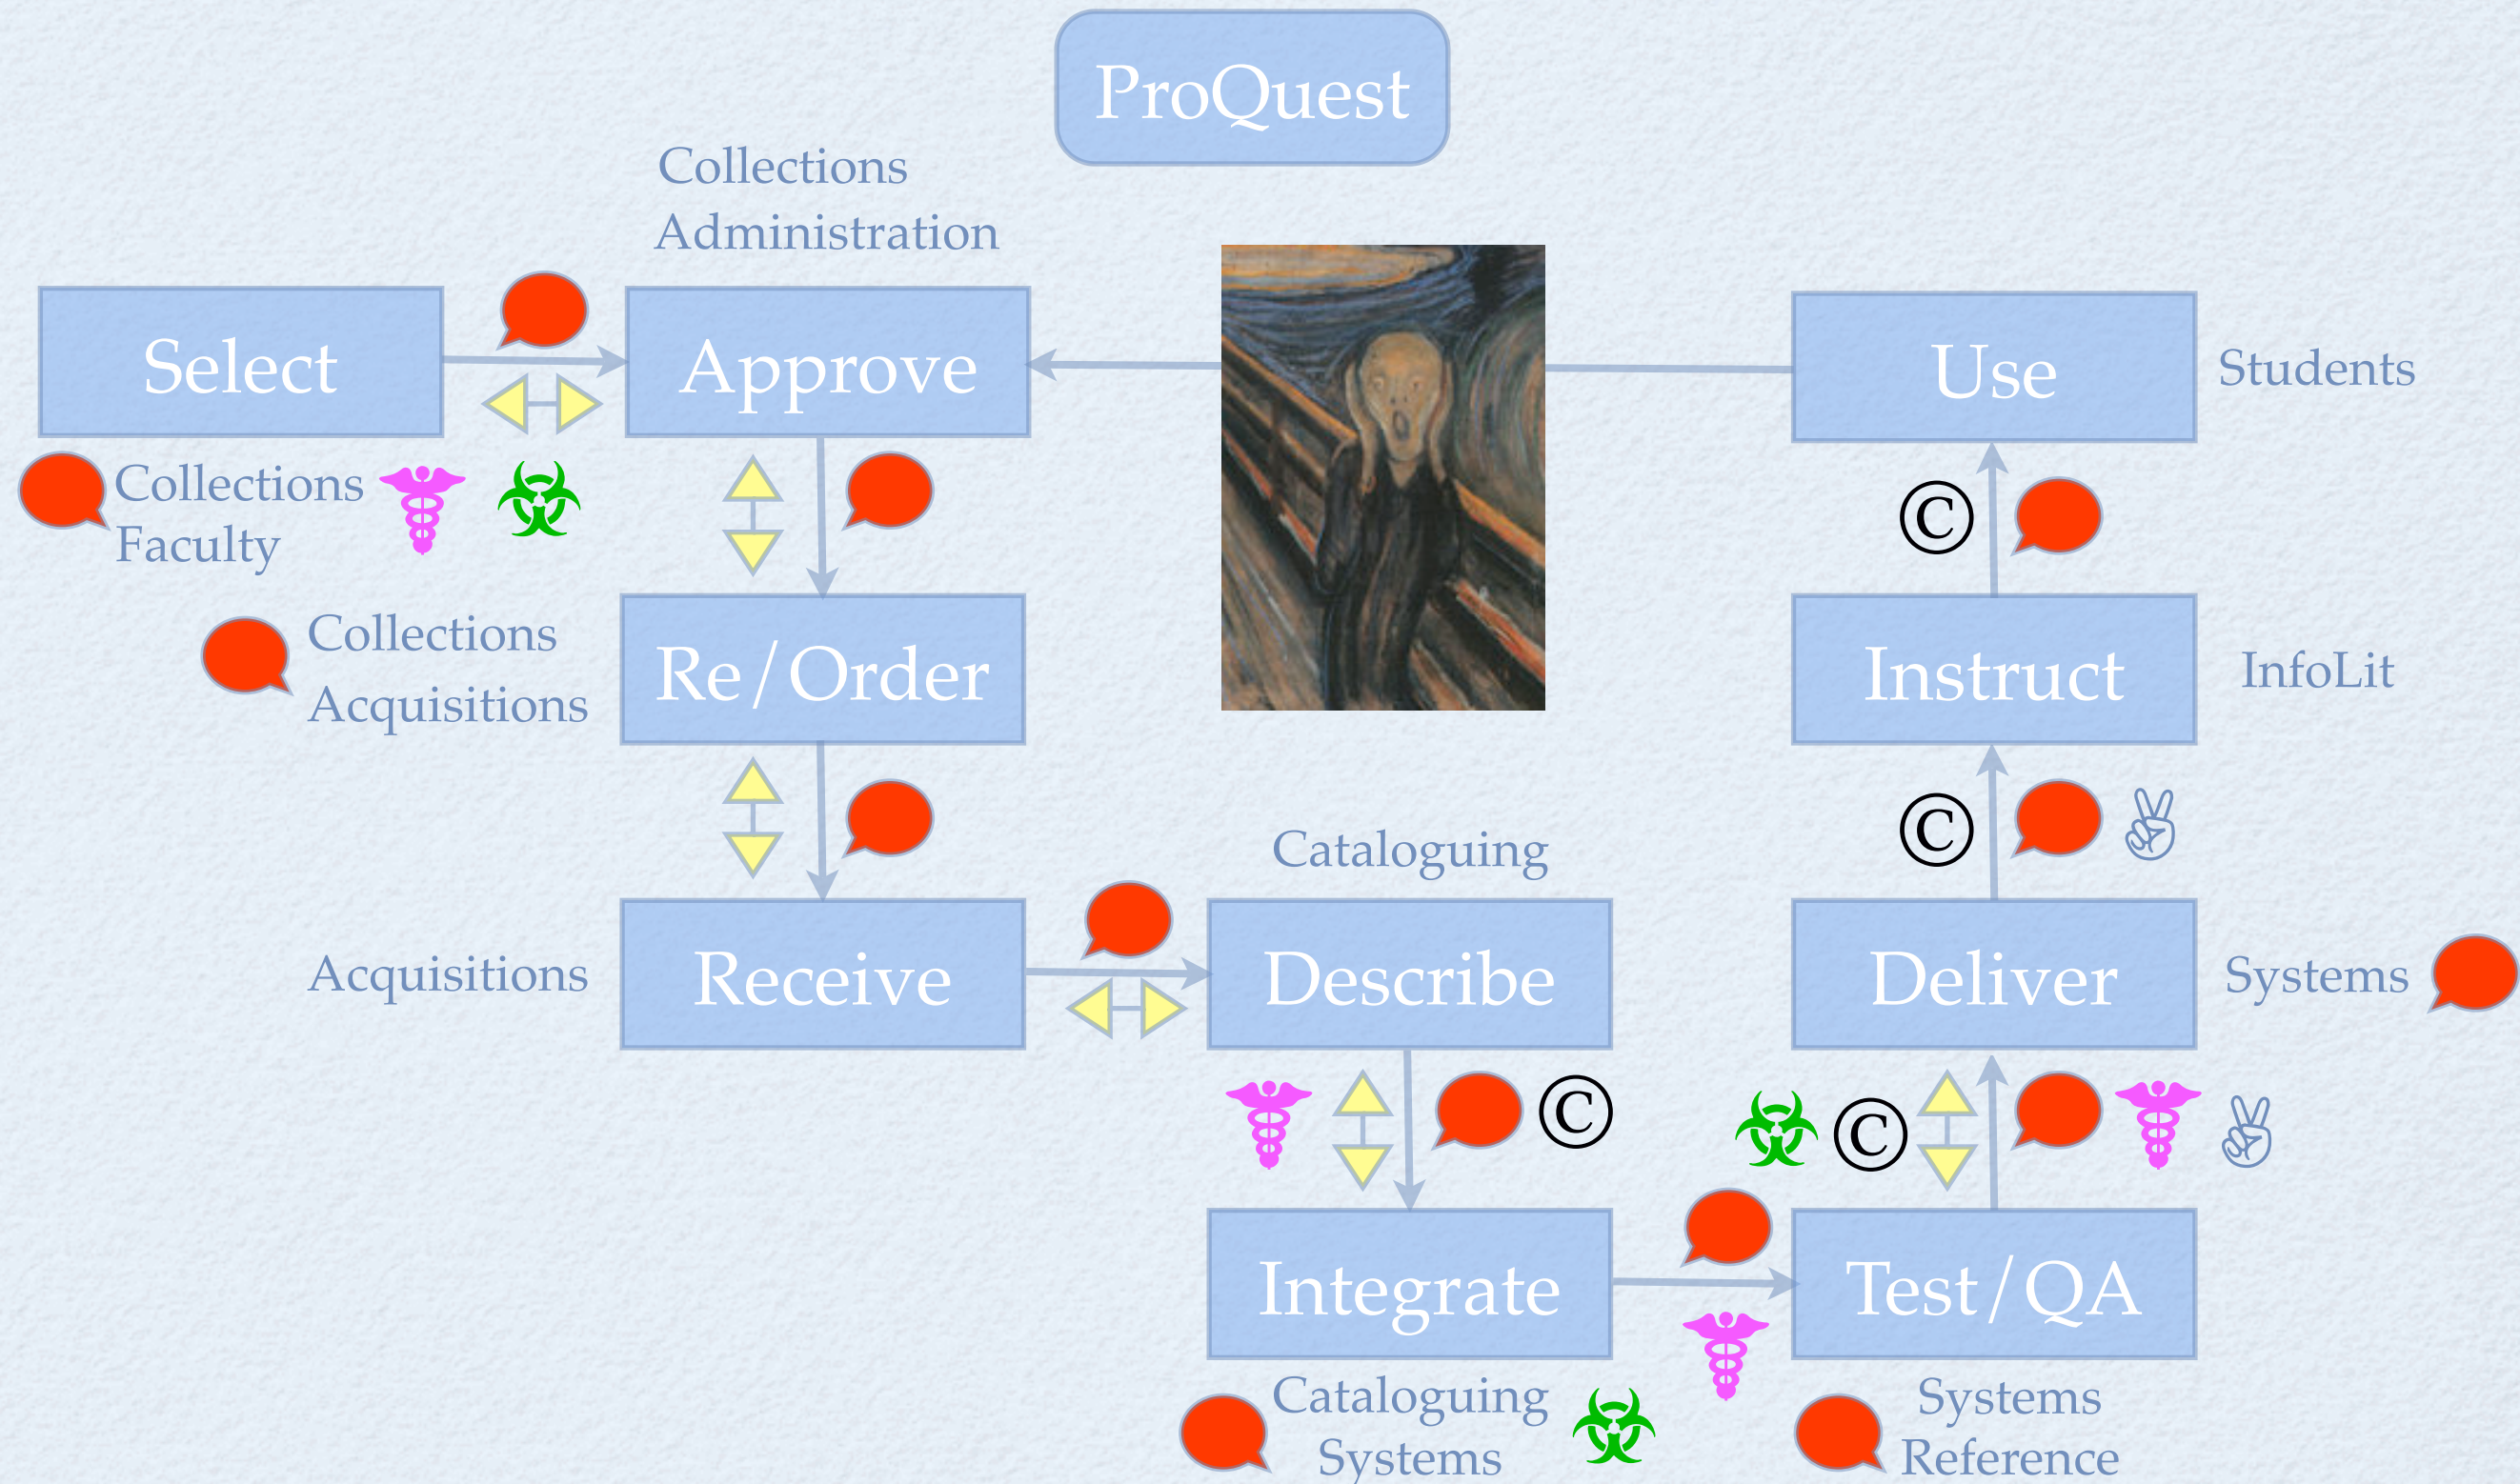

REALITY

- Psychics their pyramids, we our ILS and the RefDesk
- ERM is a new term created / used to describe how the ILS can continue to be an edifice
- Need to think in terms of LWM instead:
Library Workflow Management
- Need to think outside the ILS box

TRUISMS

- Monolithic ILS will disappear by 2008
- Functions will instead be provided by best-of-breed modules, open source & proprietary
- All objects will be described / distributed once
- Library site / resources will be mostly *invisible*

ERM WORKFLOW

DIFFERENT THAN
PHYSICAL RESOURCES?

ERM REQUIREMENTS

- Need to know about stuff
(Information Storage)
- Need to tell people and
computers about stuff
(People and system
communication)
- Minimal if any ILS
integration needed

VENDOR SOLUTION

- Most ILS vendors provide / announced
- Serials Solutions ERMS
- Adds functionality to their existing application
- Integrated into their web-based system
- Cost ?? - often \$20-30K

PROBLEM

- ILS vendors in particular need to understand that we pay annual \$\$ to get support+latest
- If we don't get new to evolve we won't
- ILSs MUST be open, or will be irrelevant
- Survival of fittest doesn't mean those who get the most \$\$, but those who who *innovate efficiently*

OPEN SOURCE

- OS community defined by *Efficient Innovation*
- REALLY responds to customer needs
- Builds staff expertise
- Programs available rising exponentially
- Much better at responding to new needs

ORGANIZATIONS CAN
EVOLVE WITH OS

CUFTS ERM

- CUFTS is an open source linking system that also provides ERM functions
- Facilitates management of print and digital journals, databases
- Automatic DBs from linking system
- Includes collection analysis tools

CUFTS

October 2005

- We need to look at upgrading this license to the Premiere license, which we do have for the Business database. This should be raised at a future Collections Committee meeting (ML - Oct 7/2005).

[Home](#)[Local Resources](#)[Statistics](#)[Site Settings](#)[Account Settings](#)[Logout](#)

FIRST GLIMPSE

- CUFTS ERM very basic (gathers / distributes information about resources)
- ERM DB easy to integrate / extend elsewhere
- SFU programmers will add capability quickly as partners use the system
- Code release means others will enhance also

OLAF

- Open Library Application Framework
- University of Winnipeg is committed to disassembling the ILS and moving to OLAF
- Timeline of 12-18 months
- OPAC / Acquisitions are underway
- Cataloguing / Circulation to follow

OLAF HELPERS

- Linux on the desktop, OpenOffice will play a major role in providing tools and functions
- \$65,000 annual investment in III / Oracle / Sun will go to building local staff expertise
- <http://wiki.uwinnipeg.ca/index.php/OLAF>
